

* For patient safety / efficiency it is preferable that patients being transferred from ED directly to wards outside of the medical assessment areas (Oken / ADU or Fairfax / FAA) are assessed by the medical / frailty teams in ED prior to transfer. If timely medical assessment is not possible and delays in transfer are compromising flow / patient safety within ED, patients may be transferred to other medical wards prior to medical assessment at the discretion of the ED co-ordinator / site team. In this situation, the Medical SpR / Frailty team MUST be informed that this transfer is taking place.
